

# pH UP Tabex® TECHNICAL DATA SHEET

## What is pH Up?

“pH” is a term used to tell how acidic or alkaline a given sample of water is. It essentially ranges from 1 to 14. pH 7 is neutral. pH range for pools is 7.4 to 7.6. If pH is too low, you will experience greater eye irritation, as well as corrosion of pool/spa surfaces and equipment. Using pH Up raises the pH to the appropriate levels, 7.4 to 7.6, which reduces eye irritation to a minimum, as well as prolongs equipment life.

## When do I add pH Up?

Test pool water with reliable test kit. Add pH Down if the pH range is below 7.4.

## Dosage Rates

Read the directions on the back of the container used. Add the recommended dosage for your size pool

## When can I use the pool?

The pool is safe immediately.
