

# POOL SECURE Tabex® TECHNICAL DATA SHEET

## What is Pool Secure?

- ◆ a concentrated liquid pool conditioner designed to sequester metals such as iron, copper and manganese out of the pool water before they are able to leave deposits in the form of stains on the pools surface
- ◆ protects pool equipment from corrosion
- ◆ ties up dissolved calcium and prevents calcium scale on pool equipment and other surfaces

## How does Pool Secure work?

- ◆ by suspending mineral deposits in the water, Pool Secure prevents them from latching onto pool surfaces and causing stains
- ◆ in the case of calcium, Pool Secure will prevent pitting and scaling of pools surfaces as well as clogged filter elements which reduce the filter's efficiency
- ◆ also forms a microscopic film coating on interior surfaces and piping which is impenetrable to oxygen
- ◆ this film protects pipes and filter elements by reducing the problems caused by oxidization and metallic corrosion

## Dosage Rates

- ◆ add 120 mL of Pool Secure for every 10, 000 L pool water, directly to the pool water, concentrating dosage over existing stains

## When can I use the Pool?

- ◆ the pool is safe 15 minutes after treatment

## When do I use it?

- ◆ should be added every time a substantial amount of new fill water is added to the swimming pool, as well as part of your regular maintenance routine to prevent stain and scale formation
